

KLUHSMAN RACING BRAKE SHIELDS

This Brake Caliper Heat Shield will lower your brake fluid temperature 10-15% and can be used with any type of brake pad. Brake Rotor temperatures can become as high as 1300 degrees and likewise calipers can develop heat as high as 500 degrees. This heat shield will lower caliper temperature and brake fluid temperature by insulating and

KRC-6000 Series

deflecting high heat transfer from the brake pad to the caliper pistons. This shield is approximately .030" thick, with minimal compression, and can be installed when new brake parts are installed. The last three digits of Hawk Brake Pads can be used as an

ordering cross reference to KRC part numbers. Listed below are the most common heat shields. For more information or customized heat shields call 1-800-814-5745.
