KRC Brake Shields KRC-6000 Series

**Contact Mark @ Hutcherson-Pagan to order,
704-597-1372 or KRC @ 800-814-5745**

This Brake Caliper Heat Shield will lower your brake fluid temperature 10-15% and can be used with any type of brake pad. Brake Rotor temperatures can become as high as 1300 degrees and likewise calipers can develop heat as high as 500 degrees. This heat shield will lower caliper temperature and brake fluid temperature by insulating and deflecting high heat transfer from the brake pad to the caliper pistons. This shield is approximately .030" thick, with minimal compression, and can be installed when new brake parts are installed.
